Vaultra Bank: Digital Banking Web Application

Banking Project | Student Project Report

1. Aim

To build a complete single-page digital banking website (Vaultra Bank) using HTML, CSS and JavaScript that lets a customer register for an account, log in securely, and manage money from a dashboard, with all data validated and stored in the browser.

2. Description

Vaultra Bank is a front-end banking demo contained in one HTML file. It has five screens: Landing page, 7-step Registration form, Login, Forgot Password and the customer Dashboard. Pages switch with animated transitions, forms are validated field by field, and user records (profile, account, card, nominee, transactions) are saved in the browser using **localStorage**. No real funds are held or transferred.

3. Pages and Modules

Page / Module	What it does
Landing page	Hero section with animated card, six feature cards, Login and Register buttons.
Registration (7 steps)	Personal, Contact, Employment, Banking, Security, Nominee and Documents, with a progress bar and validation on each step.
Account creation	Animated verification overlay, then generates Customer ID, 16-digit account number, CIF, IFSC, UPI ID and debit card number.
Login	Username and password check, show/hide password, remember me, animated credential verification.
Forgot password	Verifies the security question answer, then lets the user set a new strong password.
Dashboard	Balance, account details, KYC and service status, quick actions and recent transactions.

4. Dashboard Features

- View and edit profile (Aadhaar and PAN cannot be edited)
- Deposit and withdraw money with balance check
- Transfer money using the transaction PIN
- Transaction history with search and credit/debit filter
- Download passbook as a text file
- Card details, loan eligibility estimator, fixed deposit calculator and booking
- Settings: change password, toggle SMS alerts and internet banking
- Logout with confirmation

5. Validation Rules

Field	Rule
Name fields	Letters, spaces, dot, apostrophe and hyphen only (2 to 50 characters)
Mobile number	10 digits starting with 6, 7, 8 or 9
Aadhaar	Exactly 12 digits
PAN	Format ABCDE1234F
PIN code	6 digits
Transaction PIN	4 to 6 digits

Field	Rule
Password	Minimum 8 characters with 1 uppercase letter, 1 number and 1 symbol; must match Confirm Password
Initial deposit	Minimum ■500 (shown as Rs. 500 in code comments)
Documents	Passport photo, Aadhaar, PAN, signature and address proof must be uploaded; 3 declarations must be ticked

6. Data Storage (localStorage)

Key	Content
vaultra_users	All registered users as one object, keyed by username (personal, contact, employment, banking, nominee, security, account, transactions, avatar)
vaultra_current	Username of the logged-in user (keeps the session after refresh)

7. Procedure

1. Save the code as index.html and open it in any browser.
2. Click Register and complete all 7 steps, then press Finish Registration.
3. After the success screen, log in with the username and password you created.
4. Use the dashboard actions to deposit, withdraw, transfer, book an FD and view transactions.
5. Log out and log in again to confirm the data is saved.

8. Technologies Used

HTML5 for structure, CSS3 (variables, grid, flexbox, glassmorphism, keyframe animations) for design, and vanilla JavaScript (DOM, events, regular expressions, FileReader, Blob, localStorage) for all logic. No external libraries are used.

9. Important Notes

- Passwords and PINs are stored as plain text in localStorage only because this is a classroom demo. A real bank must hash passwords and keep data on a secure server.
- localStorage lives in one browser; clearing site data deletes all accounts. A real system needs a server and database (PHP, Node.js or Python with MySQL) to save the data.
- Uploaded documents are only checked for presence; only the passport photo is kept (as the profile picture).
- The loan eligibility figures are rough estimates and not real credit decisions.

10. Conclusion

The Vaultra Bank application covers the full customer journey: registration with validation, secure-style login, account generation and a working dashboard for everyday banking actions. The complete HTML source code is given in section 11.

11. Complete HTML Source Code (index.html)

1609 lines. Long lines are wrapped so that nothing is cut off; unsupported symbols/emojis appear as "?" in this listing only.
